I'm a Design and AI undergraduate with a background in architecture. I enjoy using creative technology to design real-world solutions. I have experience in 3D modelling, User Experience design, and have worked with real-life clients to turn ideas into functional designs. I'm also comfortable working with people from different backgrounds and using AI tools to create interactive, human-centered experiences.

EDUCATION

Singapore University of Technology and Design (SUTD) <i>Bachelor of Design and Artificial Intelligence</i>	Sep 2023 – Apr 2027
Singapore Polytechnic (SP) <i>Diploma in Architecture</i>	Apr 2019 - May 2023

EXPERIENCE

User Experience Centre (UXC) <i>Internship & part time</i>	Sep 2021– Mar 2022
• Communicated design ideas through visuals and working prototypes • Used InDesign and Illustrator to create categorized school furniture catalogues • Rendered school spaces with Enscape and Photoshop, refining tone and lighting • Redesigned learning spaces for the “Classroom of the Future” project • Prototyped an actual pregnancy belly using affordable materials with Live Well Collab • Proficient in fablab tools including vacuum former, CNC, laser cutter, and 3D printer	

CO-CURRICULAR ACTIVITIES & LEADERSHIP

Undergraduate Research Opportunities Programme (UROP) <i>3D Food printing</i>	Jan 2024 –Sep 2024
• Developed and tested healthy, vegetable-based snack recipes suitable for 3D food printing • Customized snack shapes using Foodini to appeal to children through playful and culturally inspired designs • Refined ingredient formulas (e.g., carrot and sweet potato base) for printability, taste, and nutritional balance	
DAI Outreach Exco	Jan 2025 –Present
• Organized and led outreach initiatives to promote the DAI program to prospective students and freshmores • Planned and coordinated bonding events and sharing sessions to showcase student life and projects • Designed promotional materials to strengthen program visibility and student interest • Representing the DAI community in school-wide events, providing guidance and insights to incoming students	
Undergraduate Research Opportunities Programme (UROP) <i>Wireless charging tabletop</i>	May 2025 –Dec 2025
• Designed and assembled a wireless charging tabletop • Explored coil alignment strategies to maximize charging surface area and efficiency • Investigated electromagnetic induction and tested hardware setups to improve power transfer performance • Incorporated user-centered features to enhance usability	

NOTABLE PROJECTS

Computational Thinking Design (Parametric Design)

- Created generative and parametric designs using mathematical functions and transformation logic in Grasshopper
- Built complex forms like epicyclic curves and wave surfaces by adjusting parameters and scripting geometry
- Resolved color-mapping issues through domain deconstruction and gradient remapping
- Explored design variation through parameter tuning and tile matrix generation

Computational Thinking Design (Python)

- Designed and coded an interactive terminal-based game using Python
- Developed a multi-level pet care simulator featuring cat, dog, and bird stages, where players learn how to care for virtual pets
- Implemented state-based gameplay mechanics including feeding, grooming, and playing to prevent pets from "running away"
- Created an engaging storyline set in SUTD, integrating educational elements and user decision-making

AI Applications in Design

- Built an AI pipeline to extract user pain points from reviews, manuals, and transcripts from a certain product
- Used OpenAI, Tavily API, and ChromaDB for feedback classification and RAG querying
- Identified key design improvements using sentiment analysis and ergonomic standards
- Proposed AI-enhanced solutions like live photo call-outs and spec-driven CAD updates

Product Design Studio (Client- Kates Mini Buffet Catering)

- Redesigned mini buffet experience using user research, competitor analysis, and journey mapping to improve branding and usability
- Integrated AI-driven feedback analysis to identify customer pain points from reviews and inform design decisions
- Assembled self-heating, stackable packaging with improved presentation and sustainable materials
- Prototyped and tested heat-retaining containers to enhance food quality and delivery experience

Service Design Studio (Client-Brightgen: Bloomie – AI Parenting Companion)

- Designed a smart parenting assistant that combines toddler behavioral tracking with optional genetic data for personalized developmental insights
- Conducted persona-building to identify core parental pain points, enabling emotionally resonant UI design
- Built front-end prototypes in Figma and developed back-end logic in FastAPI, Firebase, and Google Cloud for weekly planning and AI chatbot features
- Tuned tone-aware responses and visual identity to support overwhelmed parents with empathy and clarity
- Adopted Agile-inspired sprints and weekly design reviews to iteratively test features and refine functionality

SKILLS & INTERESTS

- Proficient in architecture softwares such as autocad, revit, sketchup, rhino & grasshopper and fusion 360
- Proficient in design softwares such as photoshop, indesign, illustrator, figma, dimension and premiere pro
- Proficient in rendering software such as twinmotion, Midjourney, stable diffusion, pixverse and enscape
- Intermediate in Python and Github
- Familiar with Agile methodology and Design Thinking frameworks through self-directed study and applied practice in team and solo projects
- Interests includes hiking, travelling, creative brainstorming of 3d objects & problem solving
- Language fluency: English and Mandarin
